AI and digital healthcare

AI-assisted technology for assessment and monitoring of cognitive state

Seyed-Mahdi Khaligh-Razavi, PhD

Cognetivity Neurosciences - transforming cognitive assessment through AI-driven next-generation neuroscience

Cognetivity Neurosciences Ltd
Founded 2013; went public 2018 (CSE: CGN)

Secure cloud based technology enables easy integration into existing EHR systems

Patented technology using AI to objectively measure cognitive performance

No learning effect and no cultural, linguistic or educational bias

Quick & easy, the ICA takes just 5 minutes and does not need to be administered by a clinician

Babylon

Hi Alex, how can I help?

I've got a really bad headache
and I don't know what to do...

No problem, let me ask
you a few questions

**Babylon's interactive
symptom checker asks
you questions to
analyse your condition**

Babylon's AI system has been created by experienced doctors and scientists using the latest advances in deep-learning. Much more than a searchable database, it assesses known symptoms and risk factors to provide informed, up-to-date medical information.

Ask Babylon

AI and Digital Biomarkers in Cognitive Sciences

Biomarkers

Biomarker: Definition

A characteristic that is objectively measured and evaluated as an indicator of normal biologic processes, pathogenic processes, or pharmacologic responses to a therapeutic intervention.

NIH Biomarkers Definition Working Group.
Atkinson, et al. *Clin Pharmacol Ther* 2001

Biomarkers

Digital Biomarkers of Cognitive Health

Tracking

OptiMind

ICA IN EFFECT

A quick 5 minute, simple and easy to take test, without clinician supervision

- Easy to administer, low stress
- User-needs study highlighted fun nature of test

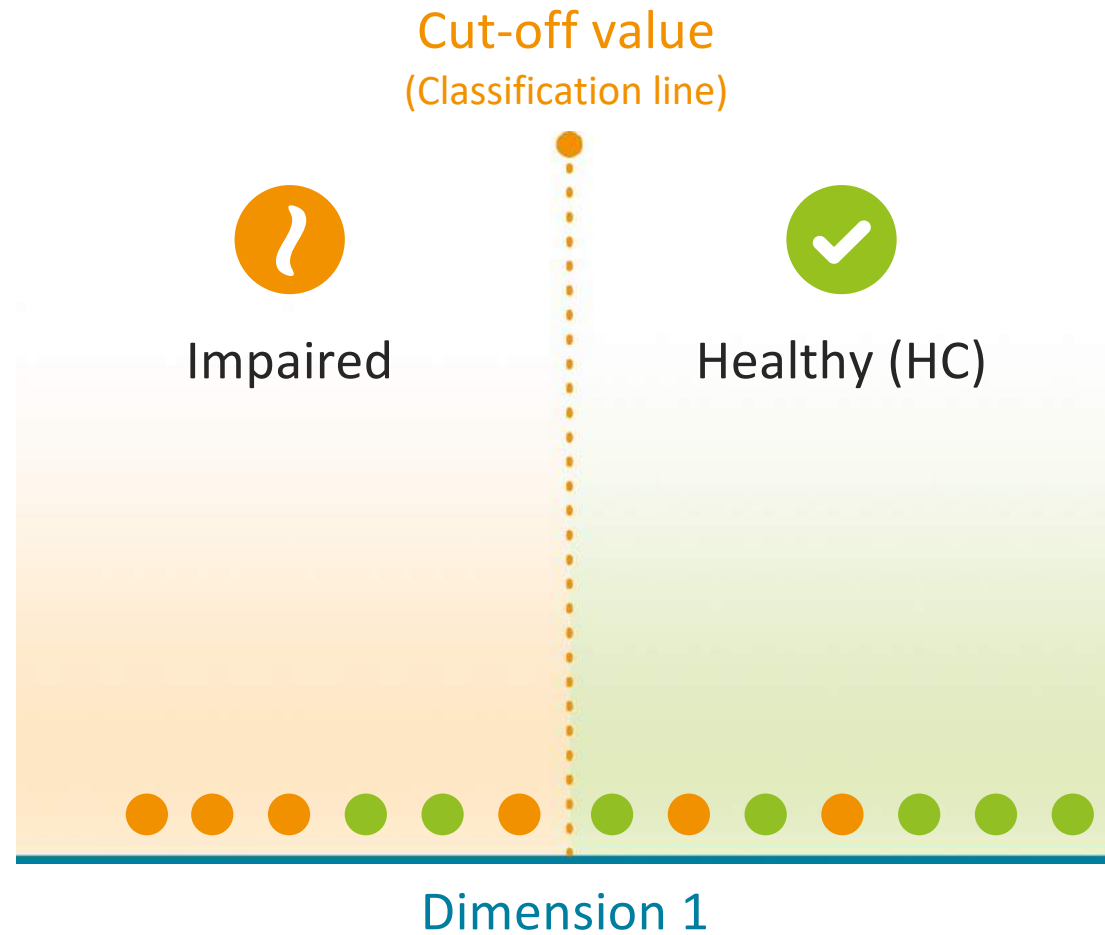

STEP 1

A selection of natural images are shown to the participants

In the ICA test, several natural images are briefly shown to participants and they are asked to respond as quickly and accurately as possible to indicate whether they've seen a pre-specified image category.

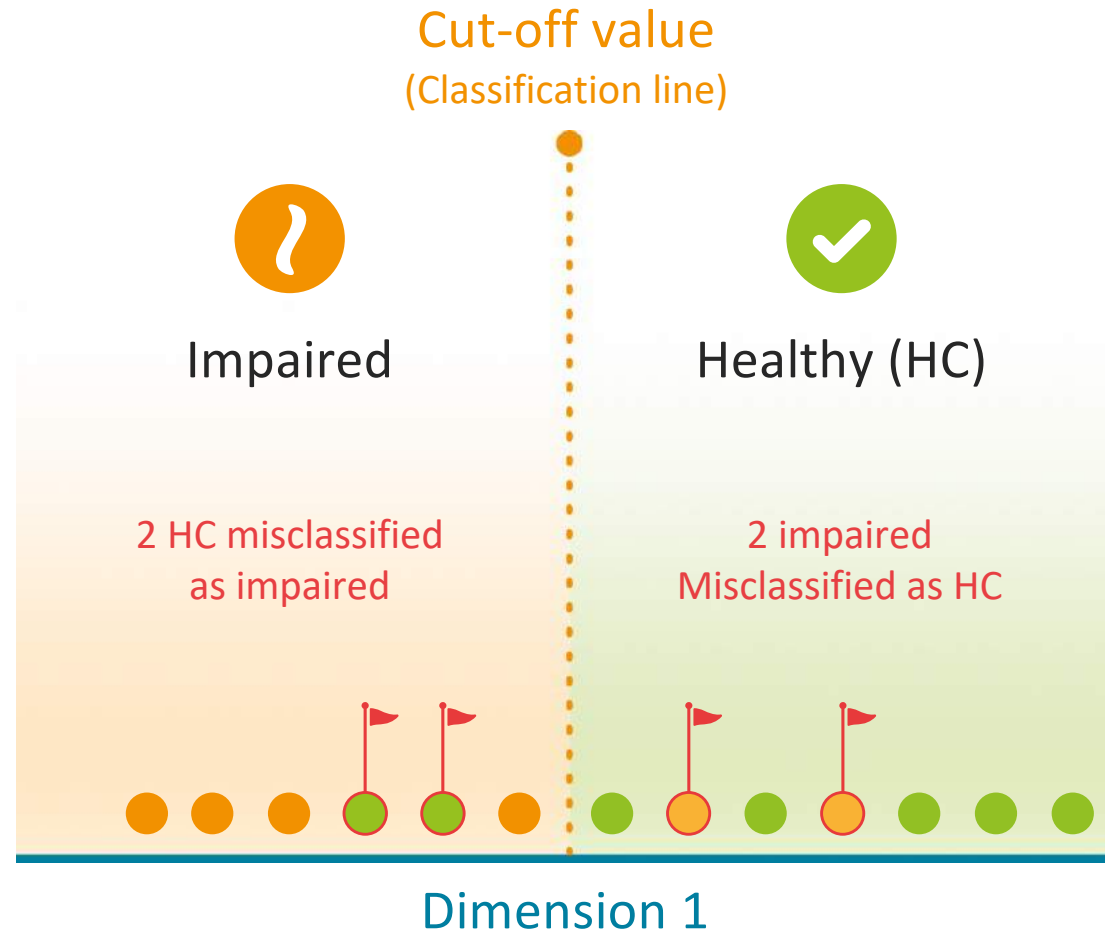

ADVANTAGES OF AI IN DISEASE CLASSIFICATION

Many existing cognitive assessments use a simple, single cutoff

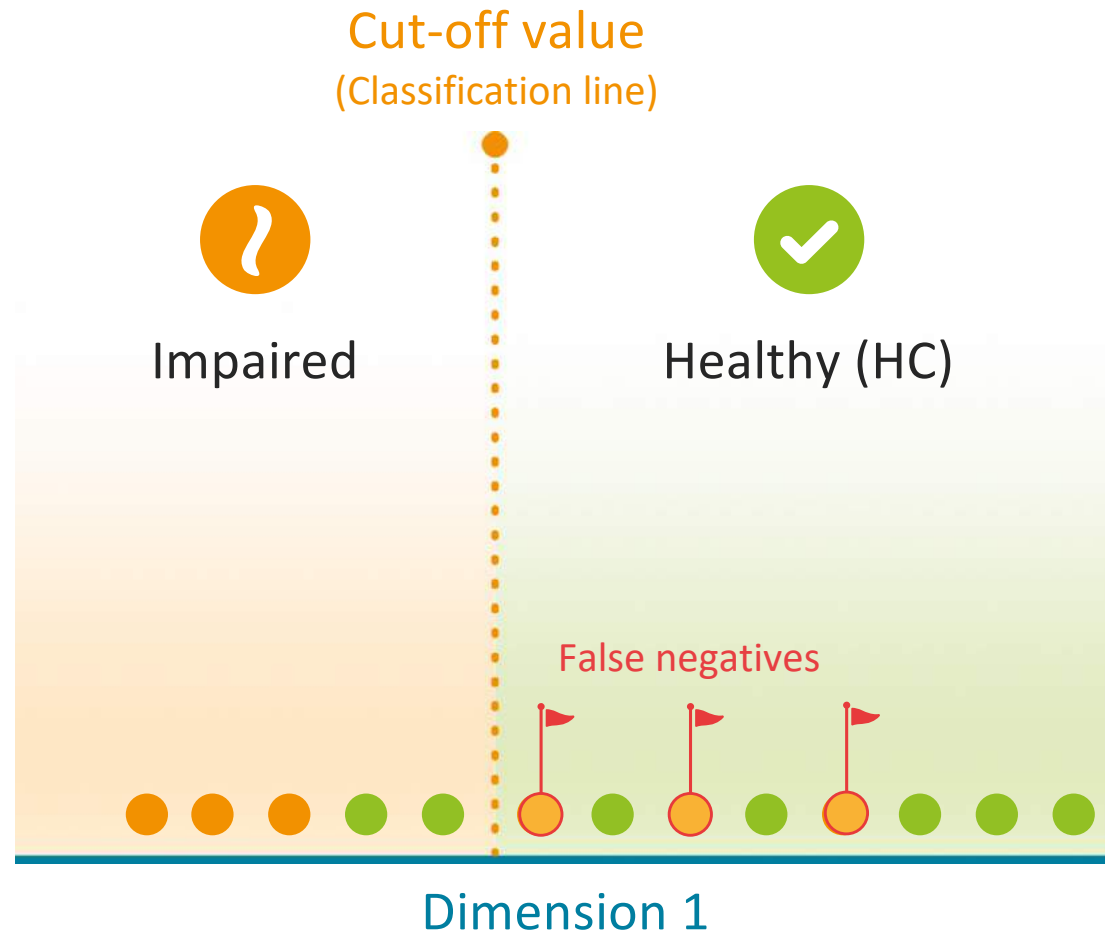

ADVANTAGES OF AI IN DISEASE CLASSIFICATION

This can lead to misclassification

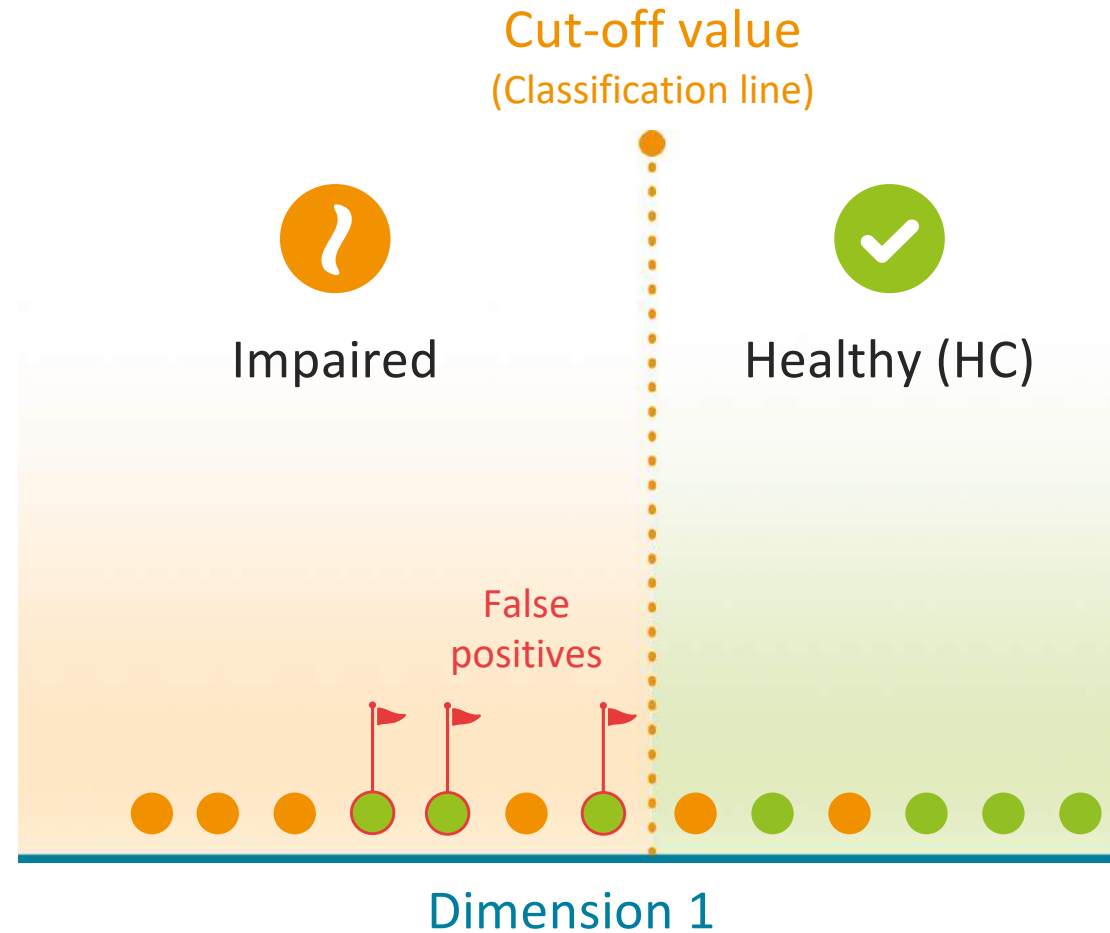

ADVANTAGES OF AI IN DISEASE CLASSIFICATION

If the, single, cut off line is adjusted; one can either get false negatives....

ADVANTAGES OF AI IN DISEASE CLASSIFICATION

Or false positives

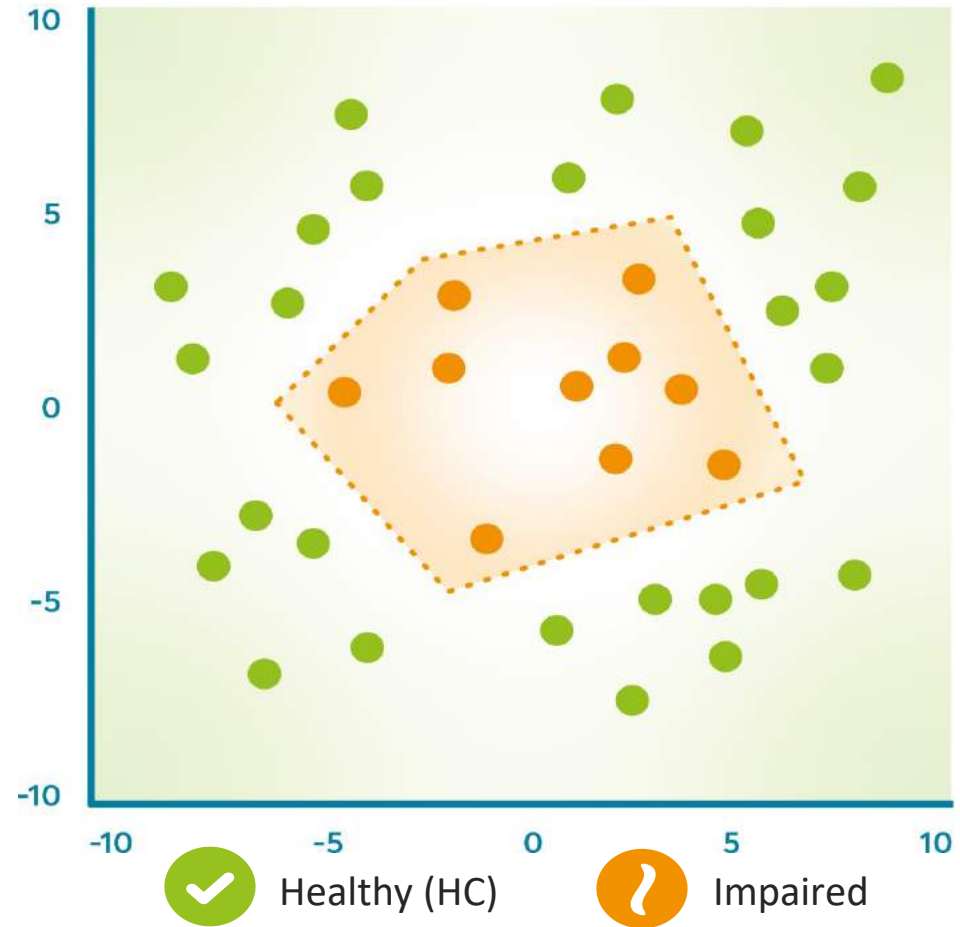

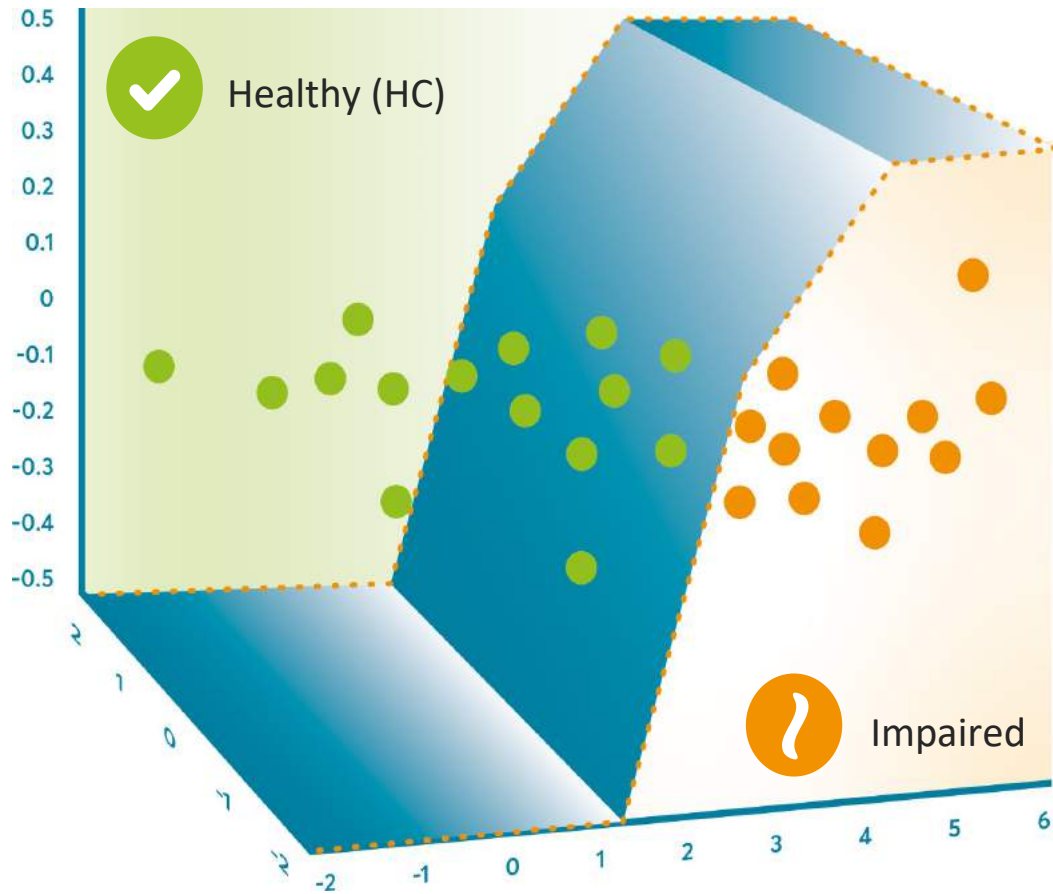

ADVANTAGES OF AI IN DISEASE CLASSIFICATION

AI can help with by expanding one dimensional classification into two...

ADVANTAGES OF AI IN DISEASE CLASSIFICATION

Or even n-dimensions

.....
Cut-off value
(Classification line)

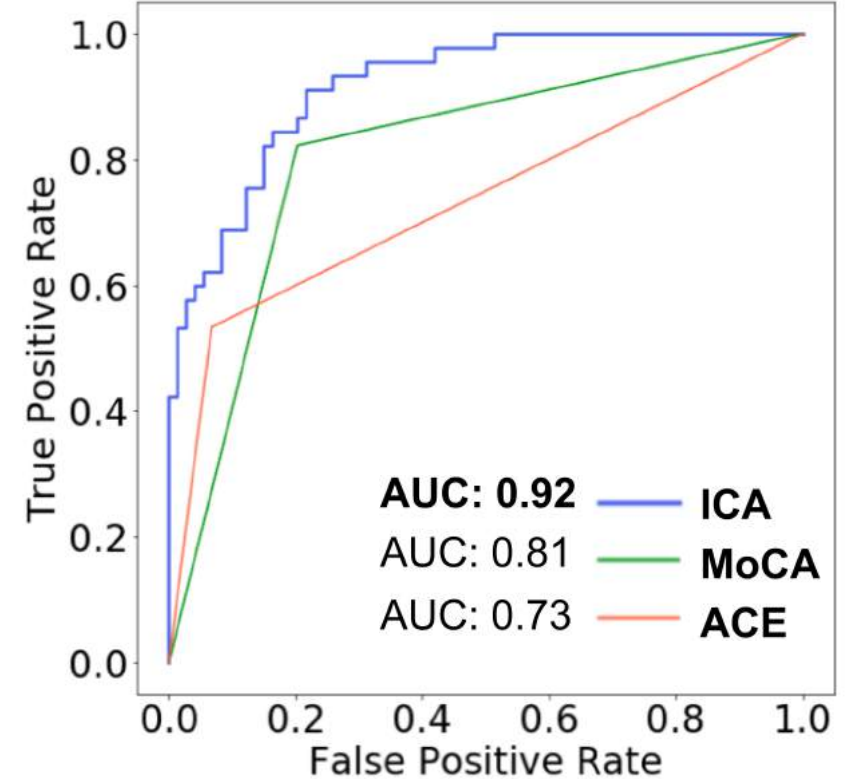

ESTABLISHING CONSTRUCT VALIDITY

The ICA has been validated against current standard of care neuropsychological tests

Healthy vs cognitively impaired

Healthy vs MCI

	# Subjects
Healthy	74
MCI	45
mild AD	25

- In head-to-head comparison with MoCA and ACE, ICA shows significantly better accuracy in detection of MCI and mild AD

ESTABLISHING LEARNING INDEPENDENCE & RELIABILITY

The ICA shows no effect of learning for repeated tests

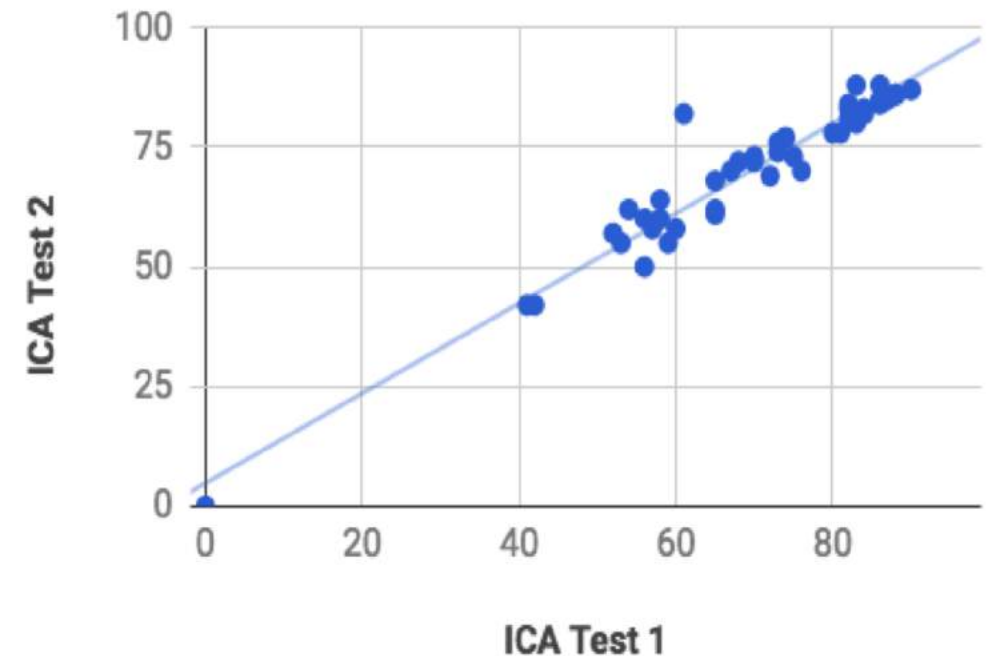

Results:

None of the points on the curve are significantly higher than any other point (Anova at $p < 0.05$)

There is no statistically significant effect of learning in repeated exposure to the ICA test

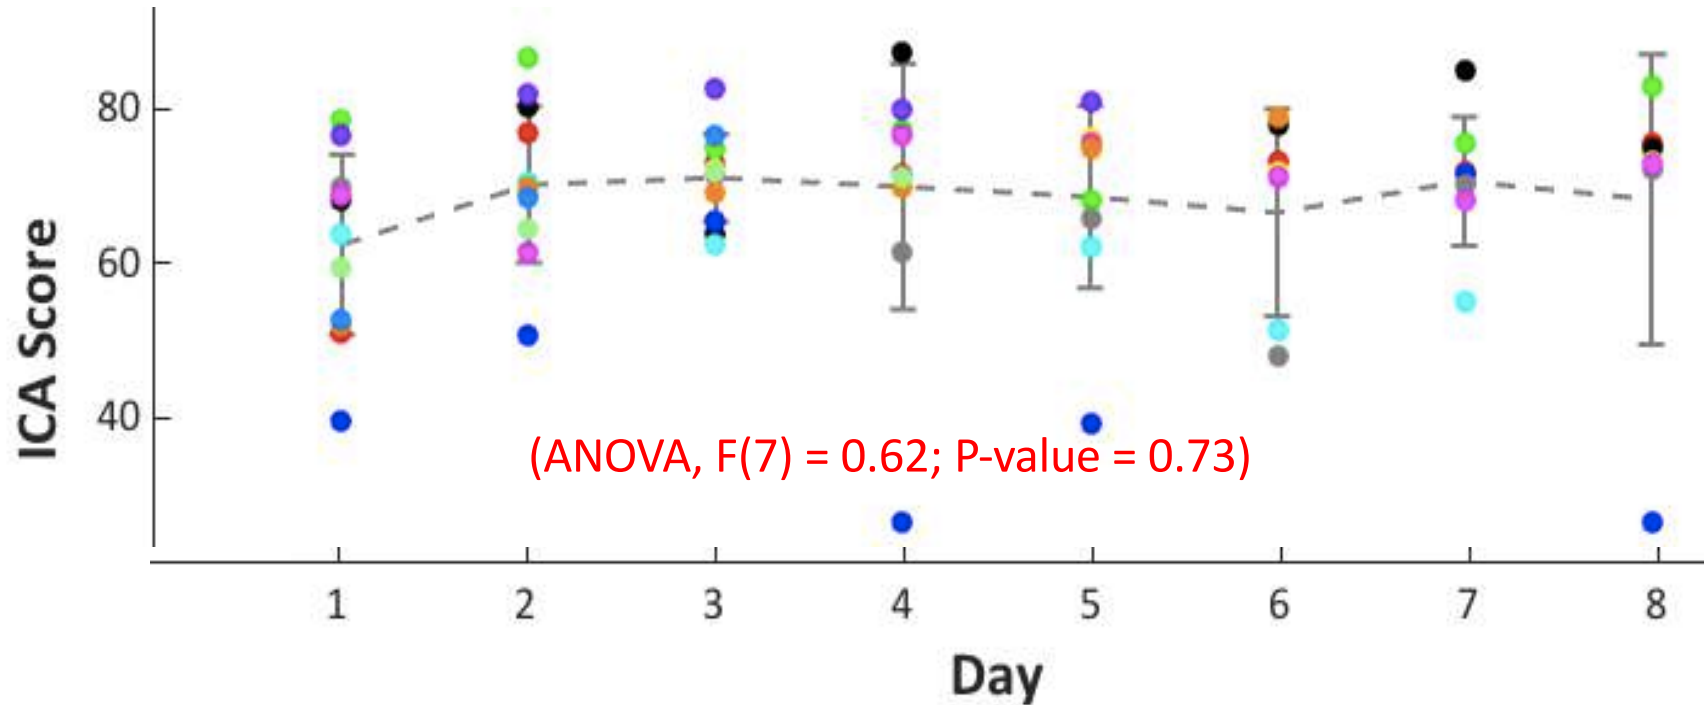

ICA test / retest on iPad platform

iPad: $r=0.96$ ($p<10^{-7}$)

ICA LEARNING EFFECT TRIAL

There is no statistically significant effect of learning in repeated exposure to the ICA test

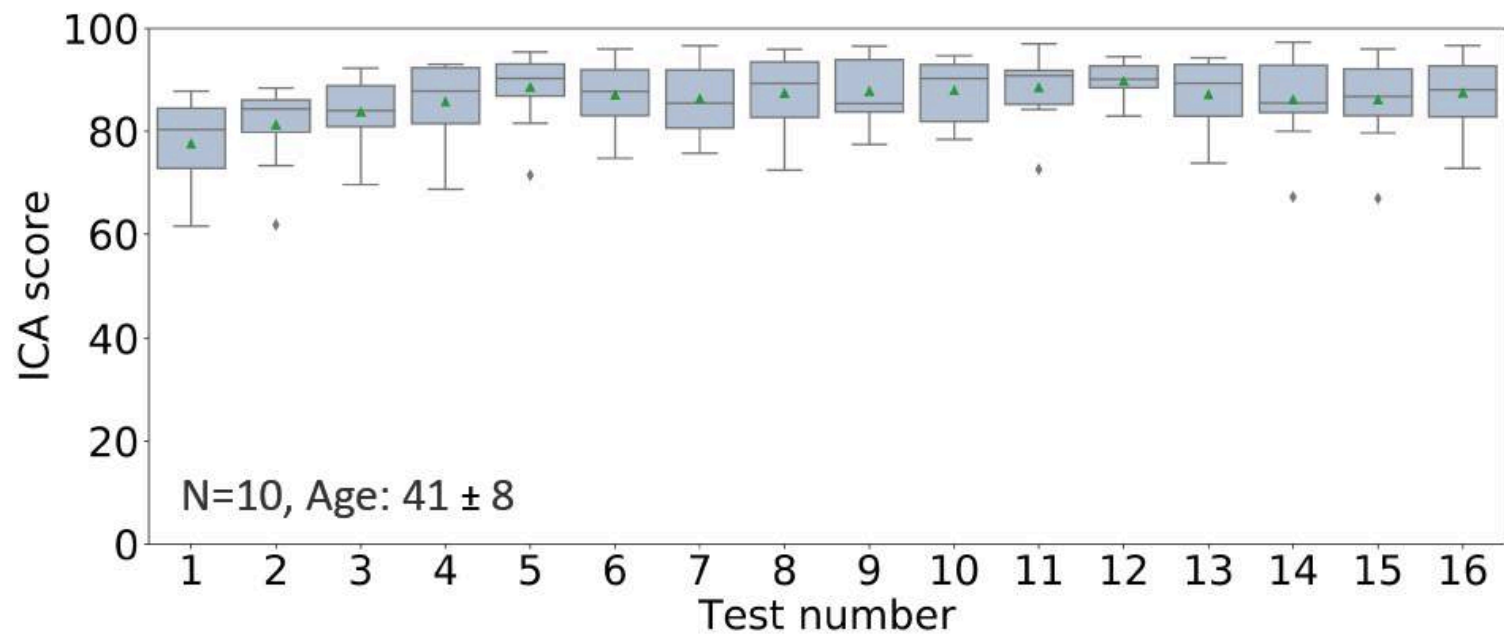

The learning effect curve does not increase monotonically

None of the points on the curve are significantly higher than any other point

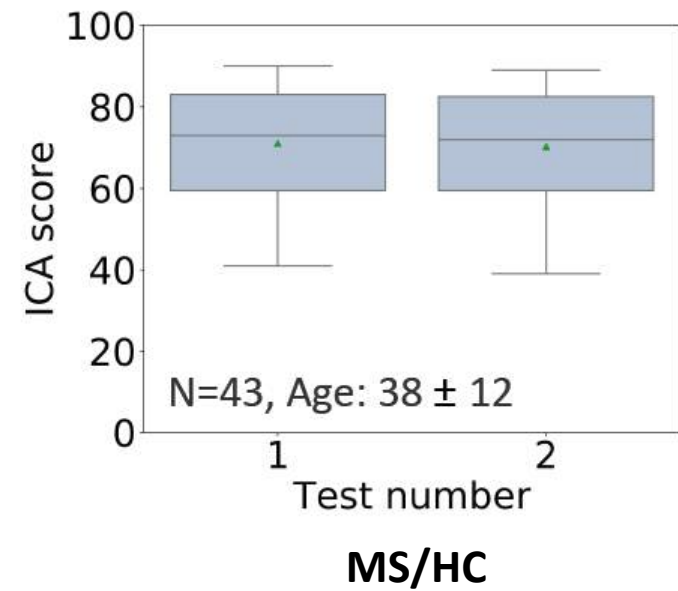

Young Healthy Participants took the ICA every other day for 8 Days

(N = 12; age range = 20 to 36)

Learning Bias -ICA

=> appropriate for frequent assessment

ICA NOT CONFOUNDED BY EDUCATION

Non-parametric test of independence indicates that the ICA is independent of education

* $P < 0.01$ [Permutation Test, Bonferroni Corrected]
ns: not significant

Monitoring disease activity in MS

quantifying disease progression or treatment efficacy
